Submission Date: 16-11-2022

1. Write a program to remove the left recursion from the given grammar.

Given a Grammar $G (V, T, P, S)$ is left recursive if it has a production in the form.

$$A \rightarrow A \alpha \mid \beta$$

Or

$$A \rightarrow A \alpha_1 \mid A \alpha_2 \mid \beta_1 \mid \beta_2 \text{ and so on ..}$$

The above Grammar is left recursive because the left of production is occurring at a first position on the right side of production. It can eliminate left recursion by replacing a pair of production with

$$A \rightarrow \beta A'$$

$$A \rightarrow \alpha A' \mid \epsilon$$

For the first case and for 2nd case

$$A \rightarrow \beta_1 A' \mid \beta_2 A'$$

$$A \rightarrow \alpha_1 A' \mid \alpha_2 A' \mid \epsilon$$

Source Code:

```
from typing import *
def printans(arr:List)->None:
    for ans in arr:
        print(ans)

def driver(directory:str)->None:

    with open(directory,'r') as file:
        s = file.readline()
        # E->E+T/T
        f = s[0]
        other = s[3:]
        a = []
        beta =[]
        li = other.strip('\n').split('|')
        beta_count=0
        for st in li:
```

```

        if f == st[0]:
            a.append(st[1:])
        else:
            beta_count += 1
            beta.append(st)

part1 = ""
part2 = " "

final_answer = []

if len(a) != 0:
    fd = f + ""
    part1 = f + "->"
    part2 = fd + "->"
    for i in range(len(a)):

        if i == len(a) - 1:
            part1 += beta[i] + fd
        else:
            part1 += beta[i] + fd + "|"

        part2 += a[i] + fd + "|"

    part2 += "Epsilon"
    final_answer.append(part1)
    final_answer.append(part2)

    printans(final_answer)
else:
    print("Sorry no left recursion found")

if __name__ == "__main__":
    directory = input("Please provide location of text-file with grammar\n")
    driver(directory)

```

Output :

- For string: $A \rightarrow Ac|Sd$

```
